Information Security Management System Scope

Date	Version	Author	Description	Approved By	Last Updated	Review Frequency	Next Review

Purpose

This document defines the scope of the Information Security Management System (ISMS) implemented by Stark Industries Inc. in alignment with ISO/IEC 27001:2022. It outlines the boundaries and applicability of the ISMS, considering the organisation's context, business objectives, and relevant requirements of interested parties. The scope ensures that information security risks are effectively identified and managed within the defined environment, supporting Stark Industries Inc.'s commitment to maintaining the confidentiality, integrity, and availability of information related to its Software-as-a-Service (SaaS) marketing platform.

Scope Statement

The ISMS covers the design, development, deployment, and maintenance of Stark Industries Inc.'s cloud-based SaaS marketing platform. It includes all processes, personnel, systems, infrastructure, and information assets directly involved in delivering the service, including development environments, production systems hosted on AWS, and supporting internal tools. The scope also encompasses relevant third-party services and vendors that support the operation and security of the platform.

Context of the Organisation

Internal Issues

Internal issues relevant to the ISMS include operating with a small team and a limited budget, which may impact the organisation's ability to dedicate resources to information security initiatives and ongoing improvements.

Interested Stakeholders

Stakeholder	Requirements
Chief Executive Officer (CEO)	Provides strategic leadership, oversees business operations, and ensures alignment with company goals and regulatory requirements.
Information Security Manager	Leads the implementation and maintenance of the ISMS. Responsible for risk management, compliance, and coordination of internal audits and reviews.
Information Security Analyst	Supports threat identification, incident response, and day-to-day monitoring of the security posture.
Cyber Security GRC Analyst	Manages governance, risk, and compliance processes. Handles policy development, risk assessments, and control mapping to ISO 27001.
Software Developer	Develops and maintains the SaaS platform codebase. Works closely with security to integrate secure development practices.
IT Infrastructure Engineer	Manages cloud infrastructure on Amazon AWS, network configuration, access controls, and supports system availability and integrity.
Amazon Web Services (AWS)	Cloud service provider hosting the SaaS platform. Responsible for physical and infrastructure-level security. Shared responsibility model requires Stark Industries to secure configurations, access, and applications.
Customers	Expect secure, reliable access to the SaaS platform. May require ISO 27001 certification for procurement. Rely on service availability, data integrity, and protection from misuse.

External Issues

Legal, Regulatory, and Contractual Obligations

There are no legal, regulatory, or contractual obligations applicable to the current scope of the ISMS.
